1. Introduction

LeapLogic's Assessment profiles existing inventory, identifies complexity, draws lineage, and provides comprehensive recommendations for migration to modern data platform.

2. SAP BODS Job Extraction

LeapLogic requires SAP BODS jobs to perform an assessment. LeapLogic needs these jobs exported as .atl files. Follow the steps given below to export a repository to a file.

When you export an entire repository to a file, SAP Data Services also exports all jobs and their job execution schedules.

1. In Data Services Designer, right-click in the Local Object Library and choose **Repository > Export To File**.
2. Browse the directory to change the location, set the file type as ATL, and enter a name for the file.
3. Click **Save**.
4. Enter a case-sensitive passphrase to encrypt all passwords that are stored in the repository and click **Export**.
